

SA-V/TVB

Automatic high barrier shrink bag making machine

ELBA

 The new **SA-V/TVB** machine has been manufactured to produce high barrier shrink bags with straight/curved bottom seal and side seal, with stack or taped-fan-like collection.

The new **SA-V/TVB** has been designed with the most advanced technology with the aim to reduce and facilitate the changeover time.

It is fully equipped with Siemens components and totally controlled by an innovative HMI based on Profinet, one of the most advanced communication protocols, that allows to control independently and in real time each one of all installed stations/tools.

The **SA-V/TVB** has been engineered with independent and plug&play station, to allow to offer tailor made solutions according to different production needs, granting the capability to be updated later on, without changing the original configuration.

Always focused on our customers' needs and knowing that energy costs are always a more expensive variable for each manufacturer, we engineered the **SA-V/TVB** with dedicated components that allow to recover the kinetic energy and then to save money in this regard.

The high quality of the used components, made also thanks to our two sister companies, combined with a constant research focused to the final user, allow to reduce the set-up time, start-up time, maintenance time and payback period.

All these features make the **SA-V/TVB** a long term reliable investment.

		SA-V/TVB 06	SA-V/TVB 09
Width	mm	80/600	80/900
Length	mm	100/750*	100/750*
Max. speed	cpm	180	
Film speed	mt	70	
Sealing radius	mm	200/230	270/350
Air consumption	l/min.	200	

* data referred to bottom radial seal
